

Mounting of mud flaps P1800

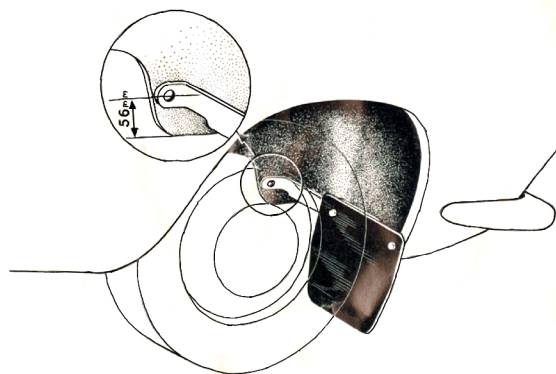

Front mud flap

The attaching bar of the mud flap is fitted at a distance of 516 mm (20 3/8") from a centre line through the wheel hubs.

NOTE! The wheels must be pointing straight forwards.

The vertical measurement for fitting the attaching bar is shown in the figure.

For fitting the stay and guard 1 piece of the mounting kit MSP1 is required. This mounting kit is enough for both sides.

Rear mud flap

The attaching bar of the mud flap is fitted on the edge of the rear mudguard and wheel housing as shown in the figure.

The longitudinal distance is determined by the rear edge of the mudguard. The vertical measurement for positioning the guard is shown in the figure.

For fitting the stay and guard 1 piece of the mounting kit MSP2 is required. This mounting kit is enough for both sides.
